Sunnandæg and Sæternesdæg for Mac

Hi, a short update from k.odk.

Sunday and Saturday, on the Mac

Sunnandæg
Mac · AU · VST3

Sæternesdæg
Mac · AU · VST3

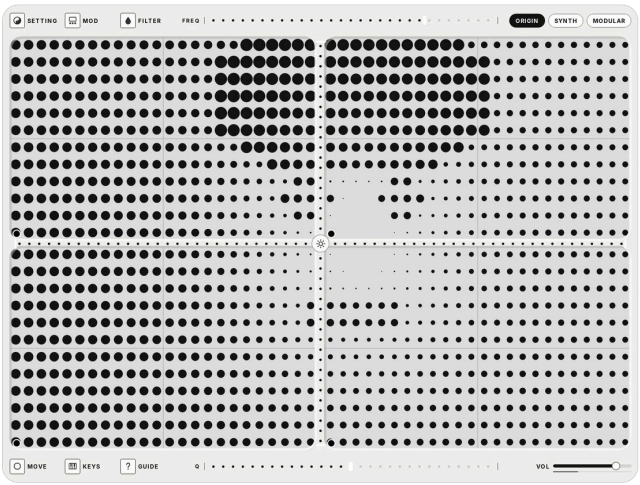

Two of the weekday instruments have come to the Mac. Each one is a standalone app, an Audio Unit (AUv3) for Logic, GarageBand and other AU hosts, and a VST3 for Live, Bitwig, Reaper and the rest — one installer, Apple silicon and Intel, macOS 12 or later. They are sold on Gumroad:

- Sunnandæg — kodk.gumroad.com/l/sunnandaeg
- Sæternesdæg — kodk.gumroad.com/l/saeternesdaeg

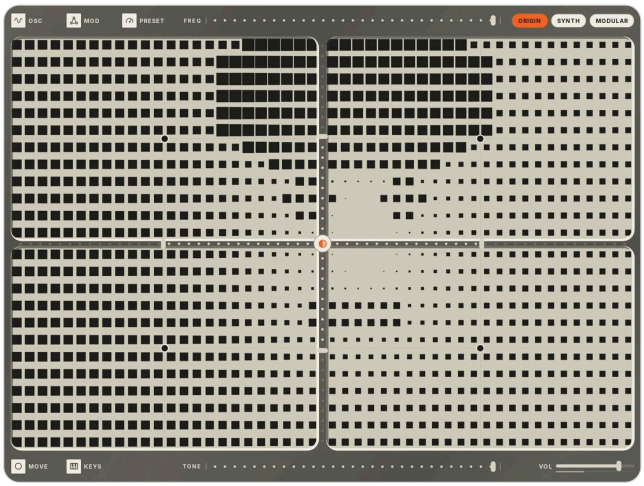

Already have the iOS app? There's a $10-off code in that app's user guide, under CREDITS. **Prices follow where you live:** in many countries the price is lowered automatically at checkout, no code needed. (A code replaces that discount, so if it would cost more, leave it out.)

The sun and the moon

In ORIGIN, the key where the four pads meet turns on the Mac's camera — the sun in Sunnandæg, the moon in Sæternesdæg. Open both at once and let the camera play them together. Both, played by the camera — on Instagram

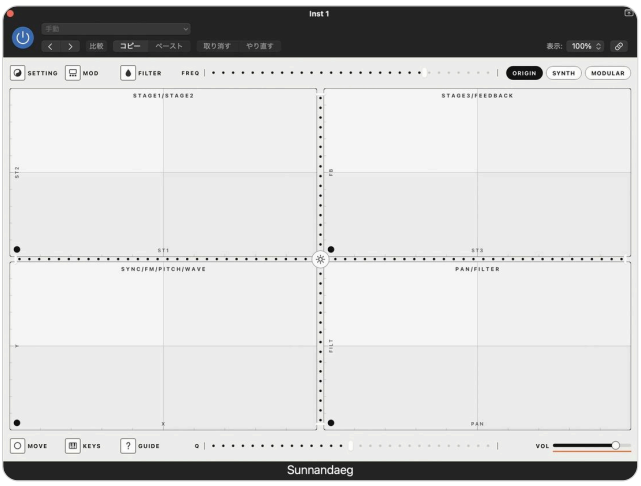

Sunnandæg · the sun

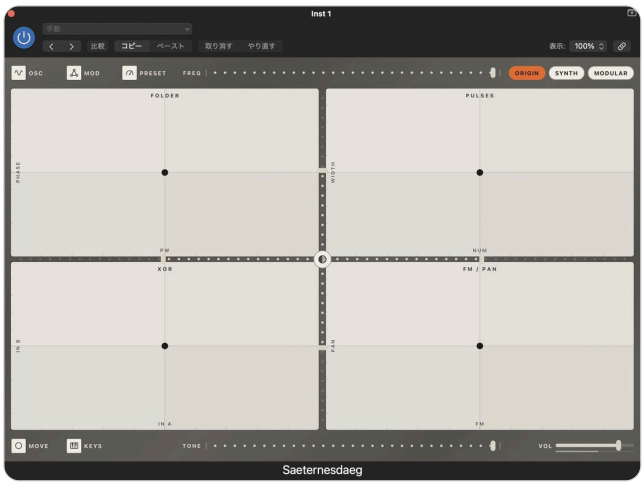

Sæternesdæg · the moon

Three modes in each

ORIGIN is the iOS app's circuit, played on four pads. In Sunnandæg, one sine through three folds, fed back into themselves, then Twin Peak or a plain low-pass and the Rez EQ. In Sæternesdæg, one oscillator through a shaper, a pulser and an XOR, with the end of the chain fed back to its start.

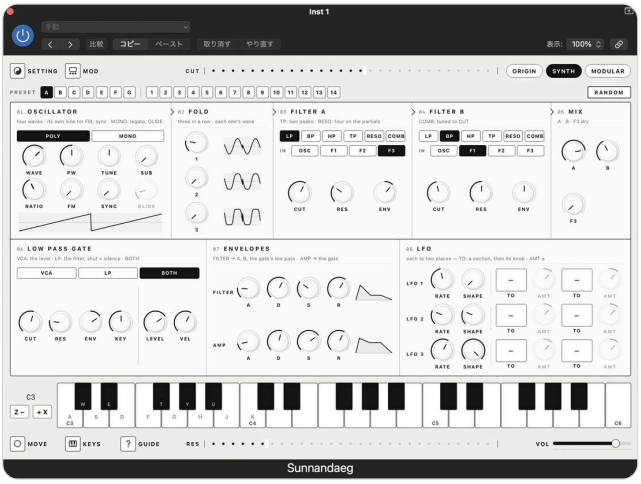

Sunnandæg · ORIGIN

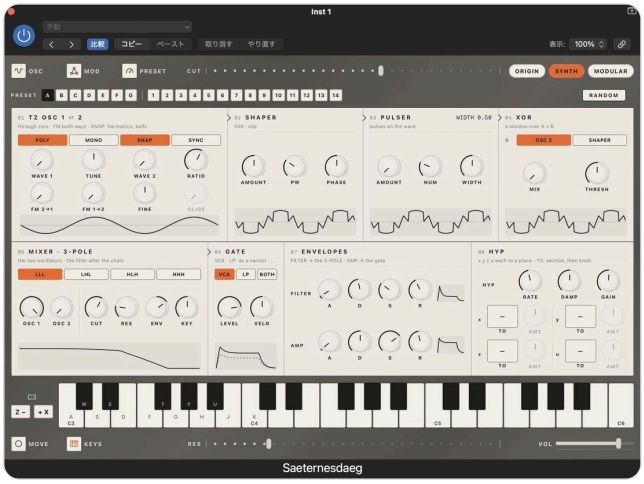

Sæternesdæg · ORIGIN

SYNTH lays the same circuit out as a playable synthesizer, eight voices (or one, legato), played from your keyboard or your DAW. Sunnandæg: an oscillator, three folds, two filters, a mix and a low pass gate, with envelopes and three LFOs. Sæternesdæg: two through-zero oscillators modulating each other — bells come easily — then the shaper, the pulser, the XOR, a 3-pole filter and a gate, with a chaotic modulator, HYP, moving up to four knobs.

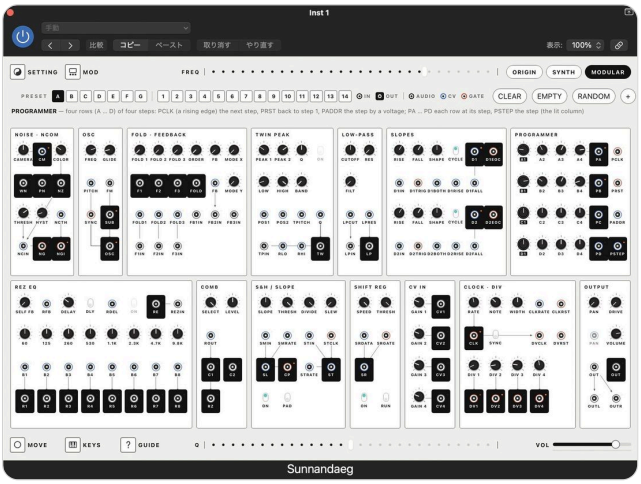

Sunnandæg · SYNTH

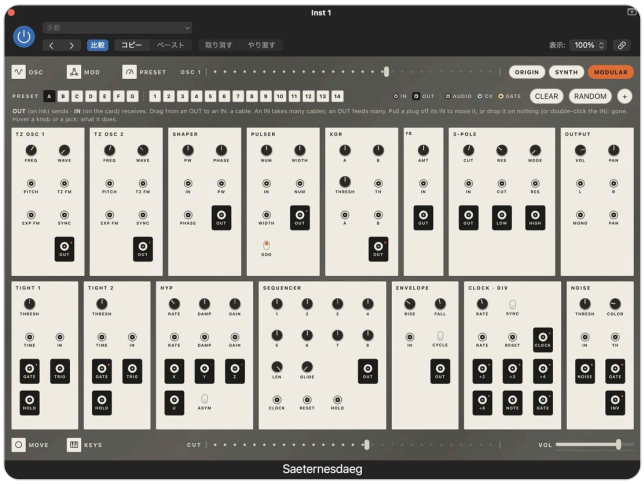

Sæternesdæg · SYNTH

MODULAR cuts every inner connection, and the circuit becomes a small modular case: drag a cable from an OUT to an IN. The top row is the sound path, the bottom row moves it. **RANDOM** builds a whole patch that is always heard, and **+** adds two more cables to what is there.

Sunnandæg · MODULAR

Sæternesdæg · MODULAR

Each mode keeps its own presets, so you can move between them without losing anything.

Mac user guides

Each one has a new guide for the Mac: installing, the screen, the three modes, every panel and module, and a first patch to start from. If you own the iOS app, its own guide holds a $10-off code (CREDITS).
